

# Poland

and its collaboration with the Joint Research Centre

The **Joint Research Centre (JRC)** is a **Directorate-General of the European Commission**. Our mission is to provide **independent, evidence-based knowledge and science, supporting EU policies** throughout the entire policy process to positively impact society.

Our **2 800 staff** are based in **Belgium, Germany, Spain, Italy and the Netherlands**. In addition to performing our own research, we make sense of collective scientific knowledge from multiple sources for smarter EU policies. We often work in partnerships with universities, government offices, agencies and stakeholders at national and regional level.

## JRC approach & priorities

The JRC provides reliable and comprehensive knowledge to support EU policies. We strive for excellence in all our activities and remain agile, by regularly evaluating and adapting our strategy and ways of working to ensure that they remain fit to respond to current and emerging challenges.

We support every stages of the policymaking process in close collaboration with other DGs of the European Commission. The JRC revitalised Strategy 2030 emphasized its added value around a set of three pillars: Anticipation, Integration and Impact.

The 2023-2024 work programme of the JRC is structured around 33 portfolios, covering the areas of research of the JRC. Those fields of research range from sustainable economy to space, migration and security, but also cover digital transformation and innovation in science and policymaking. The JRC also works on energy, mobility and climate, sustainable resources, health, food and nuclear security and waste management.

Discover the diversity of our portfolios!

Partnerships are a key element of the JRC's strategy. We embrace new partnerships across Europe and internationally to broaden the knowledge base and impact of our work to ensure that science delivers for EU policy.

The JRC maintains a network of National Contact Points (NCPs) to provide guidance, practical information and assistance. You can reach out to your JRC NCP for more information here:

## The cooperation in a nutshell

The JRC has established a strong and productive partnership with Poland in the fields of raw materials, smart specialisation, nuclear research and cancer therapy. Through this collaboration, the JRC has worked closely with Polish national authorities, research institutions and other stakeholders to exchange knowledge, share expertise, and jointly address common challenges.

This partnership has led to the development of innovative solutions and the implementation of impactful projects that have benefitted both parties. Regular visits of Polish partner organisations and institutions to JRC laboratories take place to explore new areas of cooperations and increase cooperation through knowledge exchange and joint programmes.

## Examples of collaboration

### Nuclear Safety and Security

The JRC closely collaborates with Polish authorities in various areas related to nuclear safety, safeguards, and security. This partnership is focused on obtaining and exchanging scientific data to enhance nuclear safety standards for existing and future nuclear reactors in Poland.

Through this cooperation, the JRC and Polish authorities ensure that the latest scientific knowledge and research findings are utilised to enhance the safety and security measures within the nuclear energy sector. This collaboration underscores their commitment to advancing nuclear safety and security through the exchange of expertise and information.

### Making choices of where to invest in green-space in cities

The JRC has developed ESTIMAP, an advanced and innovative geographical tool that is designed to model various factors related to European ecosystems, including considerations such as air quality and recreational opportunities. The city of Poznan in Poland recognised the potential of this tool and used it to strategically analyse and identify optimal areas for investing in new green spaces within their urban environment. By leveraging ESTIMAP, Poznan aimed to enhance the quality of life for its residents and promote sustainable urban development. This collaboration highlights the synergy between the JRC and local municipalities in utilising cutting-edge technology to make informed decisions for the benefit of the community.

### JRC Board of Governors

The JRC Board of Governors advises the Director-General and the European Commission on the strategic role, scientific, technical, and financial management of the JRC. Board members, nominated by the Commission upon designation of the country's authorities, also represent the interests of the JRC in their respective countries.

# Working together?

## Using our labs and infrastructures

Since 2017 the JRC has opened up 17 of its physical research infrastructures to academia, research organisations and Industry to conduct experimental work and receive training and capacity building in the fields of nuclear safety and security, chemistry, life sciences, physical sciences and ICT. Moreover, the JRC is offering EU innovators the chance to use 'living labs' at its sites in Geel, Ispra, and Petten, which simulate urban and rural environments where innovative solutions can be co-created and tested in close to-real-life conditions. Current pilot projects focus on future mobility and digital energy solutions. Future applications will include advanced connectivity and positioning, and indirect infrastructure monitoring.

## JRC support for standardisation

Standardisation and harmonisation promote innovation and competitiveness. They also build consumer trust and are essential for the European single market. For these reasons, more than 70 % of the JRC's projects involve work on standardisation and harmonisation. The JRC also participates in more than 140 technical committees linked to standardisation organizations. The JRC further plays a key role in the development of reference materials. The JRC carries out research to lay the scientific foundations before a standard is adopted, for example, by developing analytical methods.

## Partnership for regional innovation

The JRC hosts the Smart Specialisation Platform, which helps European countries and regions identify which research and innovation areas to invest in. The Platform takes into account a country or region's existing strengths and upcoming challenges. We have provided science-based advice for policymakers, businesses and research institutions. And we have developed more than one hundred Smart Specialisation Strategies for various European regions and Member States, e.g. for the agri-food and energy sectors. The Platform has helped foster many partnerships both within the EU and beyond.

## Working at the JRC

From within the heart of Europe, JRC researchers contribute to evidence-based policymaking to improve our society. They experience a diverse and enriching environment where we nurture innovation and creativity, offering rich learning and development opportunities for them to grow professionally. For experienced researchers we have two main types of contracts: as Contractual Agents for up to 6 years, or as permanent civil servants. For PhD students, we offer partnerships through which they can come and do their research at the JRC during their PhD. For recent graduates, we offer a paid five months JRC scientific traineeship, specifically for scientists that have finished their bachelors.

<https://europa.eu/!4CJHhB>

## Knowledge centres and competence centres

The JRC hosts several Commission Knowledge Centres and Competence Centres. These Centres bring together experts, stakeholders and knowledge from both within and outside the European Commission. Knowledge Centres are built around topics, while Competence Centres focus on analytical tools. Together, they inform policymakers, stakeholders and the general public about the latest scientific findings that are relevant for policy. They provide contextualised evidence, reviews, data analysis and data visualisation.

<https://europa.eu/!Mt34fJ>

## Collaborative doctoral partnerships

In 2016, the JRC launched the Collaborative Doctoral Partnerships programme to establish strategic cooperation with institutions of higher education that have excellent research credentials and an international reputation. The programme is designed to train a new generation of doctoral students in specific scientific fields, with a focus on the science-policy interface.

<https://europa.eu/!bqyF4m>

## Centre for Advanced Studies

The JRC Centre for Advanced Studies (CAS) aims to enhance our capabilities to better understand and address complex and long-term societal challenges facing the EU. Together, JRC and external scientists, research in areas that could become relevant for policy making in the coming 3 to 5 years. This close relationship provides access to exceptional research capacity and knowledge. The results of this collaboration forms part of the JRC's knowledge base.

<https://europa.eu/!GCxGQY>

## Accessing our databases and models

In line with our values of openness and transparency, we grant access to the JRC's services, databases and tools, including more than 100 models.
